

MAISON ANVERSA

Developer Briefing

Production Website Specification

Client: Yusuf Savran — Founder, Maison Anversa

Contact: yusuf_savran@hotmail.com

Live prototype: <https://maisonanversa.pplx.app>

Source code: Attached as zip (maison-anversa-source.zip)

August 2026

1. What You Have

A fully functional prototype (HTML/CSS/JS) that serves as the blueprint for the production website. The prototype includes:

- 1 HTML file (**index.html**, ~5,300 lines) containing all pages, styling, and scripts
- 1 i18n engine (**i18n.js**) with 500+ translations (NL/EN/FR)
- 37 images (room photos, product photos, logos, editorial)
- 14 pages: home, maison, product, story, founding circle, dressing room, journal, community, club corner, contact, privacy, terms, shipping, care

The prototype is hosted on pplx.app. The source code in the zip is fully functional — open **index.html** in a browser to see everything working.

2. The Brand

Maison Anversa is a European heritage house rooted in Antwerp. Not a sports brand — a "Maison" (house) where each room tells a different part of the brand. The first product is Heritage No.001, a padel racket limited to 100 numbered pieces (Founding Edition, €249/piece, delivery Q1 2027).

Tagline: European Heritage Sports and Lifestyle House

Tone of voice: Calm, confident, luxurious. No "buy now!" language. No urgency tactics. Narrative, honest, artisanal.

3. Design System

3.1 Colors (exact — do not deviate)

Token	HEX	Usage
--choc	#291c18	Dark backgrounds, text on cream
--choc2	#352722	Secondary dark background
--choc3	#41332d	Tertiary dark layer
--gold	#8d705a	Accents, dividers, hover states
--gold2	#745a48	Darker accent
--cream	#f3ebe3	Light backgrounds, text on dark
--cream2	#e8e0d5	Secondary light background
--sand	#b8a898	Subtle text, borders
--stone	#8a7d72	Muted text, metadata

3.2 Typography (Google Fonts)

- Baskerville Regular — Headings, subtitles, serif elements. CSS: **font-family: 'Baskerville', serif;**
- Montserrat Light (300) — Body text, buttons, annotations, navigation. CSS: **font-family: 'Montserrat', sans-serif; font-weight: 300;**
- Load both via Google Fonts. Do not use any other typefaces.

3.3 Type Scale

Role	Size
Hero title	clamp(48px, 8vw, 120px) — Baskerville, weight 400
Section title	clamp(32px, 5vw, 64px) — Baskerville
Subtitle	clamp(18px, 2.5vw, 28px) — Baskerville
Eyebrow	11px Montserrat, letter-spacing 0.2em, uppercase
Body	14–16px Montserrat Light, line-height 1.8
Small/metadata	12px Montserrat, color: var(--stone)

3.4 Spacing & Layout

- Max content width: 1280px (**.wrap** class)
- Section padding: 100–140px vertical (desktop), 60–80px (mobile)
- Generous whitespace — luxury feels spacious, not cramped
- Grid: CSS Grid and Flexbox. No Bootstrap or other frameworks.
- Border-radius: minimal. Square corners prevail. Only buttons have subtle radius (2–4px).

4. Page Structure

4.1 Navigation

- Fixed top bar, transparent at hero, becomes solid (choc background) on scroll
- Left: logo (logo-wordmark.jpg or text "MAISON ANVERSA" in Baskerville)
- Center: nav links — The House, Our Story, Heritage No.001, Dressing Room, Journal, Community, Club Corner, Contact
- Right: language switcher (NL / EN / FR) + "Heritage Letter" newsletter link
- Mobile: hamburger menu with full-screen overlay

4.2 Slideshow / Immersive Intro

This is the centerpiece of the website. Visitors don't just enter a webshop — they enter the "House."

Structure:

- Preloader (logo animation, 2–3s)
- Slideshow with 7 slides (navigable via arrows/swipe):
- Slide 0: Entrance Hall — "Welcome to the House"
- Slide 1: Room I — The Library (→ story page)
- Slide 2: Room II — The Atelier (→ product page)
- Slide 3: Room III — The Dressing Room (→ dressing page)
- Slide 4: Room IV — The Coffee Room (→ journal page)
- Slide 5: Room V — The Courtyard (→ corner page)
- Slide 6: The Maison — "Enter Maison Anversa" (→ home page, end CTA)
- Each slide has: eyebrow (room name), title, subtitle, background photo
- "Enter Room →" button on slides 1–5 (opens corresponding page)
- "Skip →" button to bypass slideshow
- Language switcher available during slideshow

4.3 Pages (14 total)

Page	Purpose	Key elements
Home	Brand introduction, CTA to product	Hero, brand story, product teaser, Founding Circle teaser, newsletter
Maison	Explain the house	Manifest, 8 rooms overview, Antwerp story, founder bio
Product	Sell Heritage No.001	Product gallery, specs, materials, pre-order form, FAQ, trust band
Story	Brand narrative	Founding story, Antwerp connection, why padel, future vision
Circle	Founding Circle explanation	Benefits, membership, exclusive perks

Dressing	Dressing Room (activewear)	Concept explanation, product teasers (future)
Journal	Editorial content	Blog/journal entries, brand stories
Community	Member portal	Dashboard, posts feed, exclusive content
Corner	Club Corner program	Partner info, application form
Contact	Contact options	4 contact routes (order, service, visit, advice)
Privacy	Privacy policy	GDPR compliant
Terms	Terms & conditions	Sales terms
Shipping	Shipping policy	Delivery info
Care	Care & warranty	Leather maintenance, warranty terms

5. Cinematic Effects (preserve in production!)

The prototype contains a series of cinematic effects that drive the luxury feel. These **MUST** be preserved in the production version:

Effect	Specification
1. Film grain	SVG noise overlay, opacity 0.04 (desktop) / 0.025 (mobile). Fixed position, pointer-events: none.
2. Vignette	Radial gradient overlay, 35% (desktop) / 30% (mobile). Fixed position.
3. Custom cursor	28px circle, mix-blend-mode: difference. Desktop only.
4. Magnetic buttons	Buttons move slightly toward mouse (0.12 multiplier, max 10px). Desktop only.
5. Page transitions	Fade overlay on page change, 450ms (desktop) / 300ms (mobile).
6. Scroll reveals	Elements appear with translateY animation (40px desktop / 25px mobile), 0.8–1.2s, IntersectionObserver.
7. Mouse parallax	Background elements move slightly with mouse (10px max). Desktop only.
8. Touch parallax	Mobile variant (6px max).
9. Marquee fade	Text marquee with CSS mask-image gradient (soft fade on both edges).
10. Preloader animation	Logo reveal with progress bar.

All effects **MUST** be disabled when **prefers-reduced-motion: reduce**.

6. Multi-Language (i18n)

Current implementation

- Dutch is the source language in HTML
- **i18n.js** contains 500+ translations (NL → EN, NL → FR)
- TreeWalker scans DOM text nodes and replaces text
- Language stored in localStorage (**ma-lang** key)
- On language switch: page reloads (to restore NL source text), then applyLang() applies translations
- Slideshow texts have separate **_en** and **_fr** fields in JavaScript array
- Language switcher in nav (NL/EN/FR buttons) and in slideshow intro

For production

The i18n approach needs to be more robust. Recommended options:

- Next.js + next-intl or next-i18next — if using Next.js
- React i18next — if using React
- Vue I18n — if using Vue
- Or a headless CMS (Sanity, Contentful) with translation fields

Either way: the translation data in **i18n.js** is your source. Use it as the dataset for the production i18n system.

7. Production Features Still Missing

The prototype is front-end only. For the production version, these must be added:

7.1 E-commerce

- Payment integration — Stripe or Mollie (for Belgium/EU). Support credit card, Bancontact, iDEAL.
- Shopping cart / checkout flow — Pre-order flow: product → options (number, monogram) → payment → confirmation
- Inventory management — 100-piece tracking, edition number assignment, "X / 100 available" counter
- Order management backend — Admin dashboard to manage orders, status updates, customer communication
- Customer accounts — Founding Circle member portal with login, dashboard, order status, exclusive content

7.2 CMS / Content

- Editorial CMS — For Journal entries, community posts, product updates
- Image management — Replace placeholder images with real product photography (see photography brief in zip)
- Dynamic content — Progress bar "73/100 reserved" must come from a real database, not hardcoded

7.3 Technical

- Custom domain name — e.g. maisonanversa.com or maisonanversa.be
- SSL certificate — HTTPS required
- SEO optimization — Meta tags, Open Graph, structured data, sitemap.xml
- Performance — Image optimization (WebP/AVIF), lazy loading, CDN
- Analytics — Google Analytics 4 or Plausible, conversion tracking
- Cookie banner — GDPR compliant
- Email automation — Order confirmations, shipping updates, Heritage Letter newsletter

7.4 Security

- PCI compliance — Via Stripe/Mollie (do not store card data yourself)
- Rate limiting — On orders and contact forms
- Input validation — Server-side validation on all forms
- CSRF protection — On all POST requests

8. Imagery

The prototype contains AI-generated placeholder images. These must be replaced with:

- Product photography — Heritage No.001 racket (studio, lifestyle, detail)
- Room photos — The 6 rooms (entrance hall, library, atelier, dressing room, coffee room, courtyard). Can also be high-end 3D renders.
- Editorial photos — Antwerp city, atelier atmosphere, founder portrait
- Logo files — 5 variants in **images/logos/**: logo-icon, logo-stacked, logo-wordmark, logo-emblem, logo-square

A photography brief (FOTOGRAFIEBRIEF.md) is available with detailed instructions for the photoshoot.

9. Mobile Requirements

-
- Mobile-first — The prototype is already optimized for mobile
 - Touch-friendly buttons (min 44x44px touch target)
 - Hamburger menu with full-screen overlay
 - Mobile slideshow: swipe navigation, touch parallax (6px max)
 - All cinematic effects have mobile variants (see Section 5)
 - Test on iPhone 12+ and Samsung Galaxy S20+
 - Viewport breakpoints: 375px (mobile), 768px (tablet), 1024px (desktop), 1440px+ (large desktop)

10. Brand Guidelines (do not deviate)

-
- No prominent "SALE" or "DISCOUNT" badges
 - No countdown timers
 - No pop-ups
 - No auto-play video or audio
 - No shake/pulse animations on buttons
 - Quiet luxury — the brand must not shout
 - Whitespace is luxury. No cluttered, busy layouts.
 - Product photography on dark background (var(--choc)) or warm cream (var(--cream))
 - No stock photos of models. Product and atmospheric photography only.

11. Recommended Tech Stack

The prototype is vanilla HTML/CSS/JS. For production, we recommend:

- Frontend: Next.js (React) or Nuxt (Vue) — Server-side rendering for SEO, file-based routing, API routes for backend logic
- E-commerce: Shopify Headless or Stripe Checkout — Shopify for full suite (inventory, emails, admin); Stripe for payments only
- CMS: Sanity or Contentful — For Journal posts, community content, product updates
- Hosting: Vercel or Netlify — Vercel if using Next.js (native integration); Netlify as alternative
- Database (if needed): Supabase or PlanetScale

12. Acceptance Criteria

The production website must:

- Include all 14 pages with the same content structure as the prototype
- Slideshow intro fully functional (navigable, multilingual)
- All 10 cinematic effects preserved (including mobile variants)
- Multilingual NL/EN/FR with language switcher
- Fully responsive on mobile (375px+)
- E-commerce flow: product → options → payment → confirmation
- Founding Circle member portal with login
- Custom domain with SSL
- Lighthouse score 90+ on all metrics
- SEO: meta tags, Open Graph, sitemap, structured data
- GDPR compliant (cookie banner, privacy policy)
- All placeholder images replaced with real photography

13. Suggested Timeline

Phase	Scope	Estimate
Week 1–2	Setup, routing, design system implementation	2 weeks
Week 3–4	Build all pages, slideshow, i18n	2 weeks
Week 5–6	E-commerce integration (payment flow, order management)	2 weeks
Week 7	Founding Circle portal, CMS integration	1 week
Week 8	Testing, performance, SEO, mobile QA	1 week
Week 9	Integrate real photos, load content	1 week
Week 10	Launch-ready, final QA, deploy	1 week

14. Important to Know

- The prototype on pplx.app is fully functional — use it as a live reference
- All Dutch text is final and approved by the client
- The translations in **i18n.js** are approved (NL/EN/FR)
- Colors and typefaces are locked in the brand guidelines — do not change
- The photography brief (FOTOGRAFIEBRIEF.md) contains instructions for the real photoshoot
- The client wants to test the website privately before going public
- The Founding Edition is limited to 100 pieces — the e-commerce system must enforce this hard limit

Questions?
