The lit house

MAISON ANVERSA

What changes. The current opening scene (full-screen photo slideshow “Welcome to the House”, 8 slides) is replaced by **the lit house**. After the door opens, “Enter the house” leads here. Each of the 8 windows of our house illustration is one room. The windows light up one by one; a tap opens the room. **A room photo is loaded only when that room is chosen**, never upfront.

1 · Flow

#	SCREEN	WHAT HAPPENS
1	The door opens	As in the briefing of 29 October. “Enter the house” → screen 2 (correction: not a scroll on the same page).
2	**The lit house** (new)	Replaces the current photo opening scene. Windows light up, list of rooms beside the house. Tap a window or a name → room card with photo + “Enter …”.
3	Room page	The existing pages (see table on page 3), unchanged.

The homepage and the existing House page with the cross-section stay as they are.

2 · Storyboard (desktop)

0.9 s · first windows light up | 1.7 s · first floor | 2.6 s · dormers | 4.2 s · all 8 rooms lit, list of rooms | Tap on a window · room card

On mobile the list of rooms and the room card sit under the house. Working references: opening-reference.html (door) and house-lit-reference.html in the zip; both replace the earlier versions.

The right light

MAISON ANVERSA

Idea. The door and the lit house follow the visitor's local time. In the evening you walk into a house with its lights on; at night only a few windows still burn. No images are involved: only colours change.

Four moods

MOOD	HOURS	BACKGROUND	LINES AND TEXT	WINDOWS AT THE DOOR	GREETING
Morning	05:00–12:00	Ivory with warm sunlight from the right	Chocolate	Soft gold reflections (opacity .22–.55)	Good morning from Antwerp
Afternoon	12:00–18:00	Clear Warm Ivory	Chocolate	Off (only the door light)	Good afternoon from Antwerp
Evening	18:00–23:00	Deep Chocolate, darker at the top	Light ivory #EADCC8	All 8 lit, one by one after the door opens	Good evening from Antwerp
Night	23:00–05:00	Almost black #17100E, small moon	Muted ivory #C9B9A2	Only the balcony window and one dormer	Good night from Antwerp

How to build it

- A 6-line inline script in the **<head>** sets **<html data-light="morning|afternoon|evening|night">** **before the first paint**, so there is never a flash of the wrong colours.
- All colours are CSS variables per **data-light** (copy the block from the reference pages). The windows at the door have one opacity per mood; in the lit house all windows stay lit (day .62, evening .95, night .9) because they are the room buttons.
- Testing: add **?light=evening** (or morning, afternoon, night) to the URL.
- The register keeps its tiles; in the dark moods a selected number becomes black with an ivory border.
- Greetings in NL and FR: see the texts table of the first briefing.

Rooms, timing and interaction

MAISON ANVERSA

3 · Window → room

#	WINDOW	ROOM	SUBTITLE	DESTINATION (PER LANGUAGE)	PHOTO (AVIF 768/1280)
I	Ground floor, left	**Salon**	Reception	/en (homepage)	room-entrance
II	Ground floor, right	**Office**	Contact	/en/contact	current Office photo
III	1st floor, left	**Le Cercle**	Founding Circle	/en/circle	current Le Cercle photo
IV	1st floor, centre (balcony)	**Gallery**	Heritage N° 001	/en/products/heritage-no-001	current Gallery photo
V	1st floor, right	**Salle Commune**	Community	/en/community	room-coffee
VI	Dormer, left	**Library**	Journal	/en/journal	room-library
VII	Dormer, centre	**Atelier**	Our Story	/en/story	room-atelier
VIII	Dormer, right	**Club Corner**	The Playroom	/en/corner	room-courtyard

Room photos: use the AVIF versions that already exist for the opening scene; where a room has none yet, the frame stays empty until Yusuf supplies one.

4 · Room lines (EN; NL/FR follow with the other texts)

ROOM	LINE ON THE ROOM CARD
Salon	Where every visit begins.
Office	Questions, care and appointments.
Le Cercle	The first hundred, and what they share.
Gallery	The first racket of the house.
Salle Commune	Sessions, clubs and the people who play.
Library	Stories about sport, culture and craft.
Atelier	How the house began.
Club Corner	Maison Anversa in your padel club.

5 · Timing and behaviour

- Windows light up in the order I → VIII, starting at 0.5 s, one every 0.38 s, each 1.1 s with a short flicker (opacity 0 → .55 → .3 → .92). All lit at ± 4 s.
- Light: gradient **#F2DDB0** → **#C9A56A** behind the window frames. Selected window: **#FFF3D6**, fade .35 s.
- Each window is a real transparent **<button>** over the SVG (positions in % in the reference), with **aria-label** (“Library, Journal”) and **aria-pressed**. Hover: thin gold border.
- The list of rooms (real buttons) appears at 3.4 s. A tap on a window or a name opens the room card; “All rooms” returns to the list.
- Same rules as the door: once per session, skip on tap/scroll, reduced motion shows all windows lit at once.

Speed: four technical fixes

MAISON ANVERSA

I checked why the current opening is slow. These four points apply to the whole site, and also decide whether the door and the lit house appear instantly.

#	FINDING	FIX
1	**Nothing is visible until all JavaScript has run.** The HTML of /en contains no content (Inertia/React renders everything in the browser). On a phone the visitor sees a dark screen first.	Render the door and the lit house in the Blade template as static HTML/SVG (or enable Inertia SSR for these pages). React may take over afterwards, but the first paint must not wait for it.
2	**The first slide starts invisible** (opacity 0, scale 1.08) and fades in by script.	Not needed any more once the lit house replaces it. General rule: never hide the first screen until JS runs.
3	**Images load twice.** Besides the AVIF versions, the original PNGs of the rooms load too (± 3 MB), room-atelier.png alone 2 MB. The SEO image is also the PNG.	Remove every reference to the PNG originals from pages. SEO/OG image: one JPG 1200×630, < 150 KB. Room photos only as AVIF/WebP 768/1280, loaded on demand.
4	**Seven font files are preloaded** (5× Montserrat 300 for all language subsets).	Preload only the two Latin files (Baskervville 400, Montserrat 300/400). Other subsets load only if a page needs them.

Targets (Lighthouse mobile, Slow 4G)

- First Contentful Paint < 1.5 s · Largest Contentful Paint < 2.0 s · CLS 0.00
- Door + lit house: no image requests until a room is chosen
- Total transferred on first visit to the door: < 400 KB (fonts + CSS + JS + inline SVG)

Acceptance tests

MAISON ANVERSA

- Door → “Enter the house” opens the lit house (not a scroll, not the old slideshow).
- Windows light up I → VIII from the ground floor to the dormers; all lit at ± 4 s; list appears.
- Each window and each name opens the right room card; the right photo loads only at that moment (check in the Network tab: no room photo before a tap).
- “Enter …” goes to the right page in NL, EN and FR; “All rooms” returns to the list.
- Second visit in the session: windows lit at once. Reduced motion: no animation.
- View source of the door page and of the lit house: the SVG is in the HTML itself.
- No request for any **/images/rooms/*.png** on any page.
- Only two font files preloaded.
- The right light: with **?light=morning**, **afternoon**, **evening** and **night** the door and the lit house match page 2; without the parameter the mood follows the device clock; no colour flash on load.
- Lighthouse mobile meets the targets on page 4, on the door page and on the homepage.
- Safari iOS, Chrome Android, Firefox, Safari macOS: windows align with the buttons at every screen width; keyboard Tab reaches every window and name with a visible focus.

Scope. This replaces the current photo opening scene and adds the speed fixes. Please let Yusuf know if this changes the quote of $250 for the opening.
